                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CC describes TANGO 266, TANGO 261 proteins. The specification also CC describes TANGO 266, TANGO 262, and TANGO 267. The TANGO CC describes TANGO 266, TANGO 262, and TANGO 267. The TANGO CC cellular differentiation and/or modulate cellular proliferation, modulate CC cellular differentiation and/or modulate cellular adhesion. The CC proteins can be used to treat any von Willebrand factor-associated CC disorder, regulate extracellular matrix structuring, cellular adhesion, and/or migration, modulate cellular interactions, comodulate cell adhesion in proliferative disorders, such as cancer, comodulate the proliferation, differentiation, and/or function of cells that appear in the bone marrow, and leukocytes, treat bone marrow, blood and hematopoietic associated diseases and disorders, atelectasis, pulmonary congestion or oedema, emphysema, chronic bronchitis, bronchial asthma and bronchiectasis, intestinal disorders, spleen associated diseases, modulate the proliferation, differentiation, differentiation, comodulate renal disorders, treat cardiovascular disorders such as ischemic heart disease, modulate the proliferation, differentiation, cardiage cassociated with the ovaries, and corebral bone and/or cartilage associated with the ovaries, and cerebral oedema, bacterial and viral meningitis, Alzheimer's Disease, inflammations, bacterial and viral meningitis, and treat hepatic disorders. Contest the present sequence does not appear in the specification; it was contest using information provided.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

cc dascribes Tango 266, Tango 261 proteins. The specification also collections and the collular differentiation and/or modulate cellular proliferation, modulate cellular differentiation and/or modulate cellular and factor-associated collulate cell that ficking and/or modulate cellular differentiation. The classical cell trafficking and/or migration, modulate cellular adhesion. The condulate cell adhesion in proliferative disorders, such as cancer, cc modulate the proliferation, differentiation, modulate cellular adhesion, cc and hematopoietic associated diseases and disorders, such as cancer, cc modulate the proliferation, differentiation, and/or function of cells cashma and bronchiectasis, intestinal disorders, such as cancer, cc asthma and bronchiectasis, intestinal disorders, spleen associated diseases, modulate renal disorders, treat bone marrow, blood cashma and bronchiectasis, intestinal disorders, spleen associated cc asischemic heart disease, modulate the proliferation, differentiation, cand/or function of bone and cartilage cells and to treat bone and/or cartilage associated diseases or disorders. They may also be used to treat disorders associated with the ovaries, and cerebral oedema, bydrocephalus, brain herniations, latrogenic disease, inflammations, bacterial and viral meningitis, Alzheimer's Disease, cerebral toxoplasmosis, parkinson's disease, multiple sclerosis, brain cancers, hydrocephalus and encephalitis, and treat hepatic disease, cerebral coreated using information provided.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Š

AAA75163-65 encode human TANGO 261 proteins. The specification also describes TANGO 266, TANGO 216, TANGO 262, and TANGO 267. The TANGO polypeptides can be used to modulate cellular proliferation, modulate cellular differentiation and/or modulate cellular adhesion. The proteins can be used to treat any von Willebrand factor-associated disorder, regulate extracellular matrix structuring, cellular adhesion, and cell trafficking and/or migration, modulate cellular interactions, modulate cell adhesion in proliferative disorders, such as cancer, modulate the proliferation, differentiation, and/or function of cells
                                                                                                                                                                                       Novel human and murine secreted proteins designated TANGO 216, 262, 266 and 267 useful as modulating agents of cellular proces e.g. for treating cancer -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          15-JAN-2001

useful for disorders Claim 9; New human neuron-associated proteins and polynucleotides encoding the useful for diagnosis, treatment and prevention of cell proliferative disorders including cancer, neuronal and neurological disorders Page 136; 145pp; English.

Yang

Human neuron-associated proteins (NEUAP) can be used for for treating or preventing a disorder associated with decreased expression or activity of NEUAP. Antagonists of NEUAP are useful for treating or preventing disorder associated with increased expression or activity of NEUAP. NEUAP or their fragments or derivatives are useful for treating neurological disorder such as epilepsy, ischemic cerebrovascular disease, stroke, cerebral neoplasms, Alzhelmer's disease, Plok's disease, Huntington's disease, dementia and Parkinson's disease. NEUAPs are also useful for treating other demyelinating diseases, bacterial and viral meningitis, prion

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     801
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1278
```

The invention relates to a secretory polynucleotide (designated sptm) comprising any of 567 polynucleotide sequences (ABZ55837-ABZ56403), a naturally occurring polynucleotide sequence at least 90 % identical to the polynucleotide sequence, a polynucleotide complementary to them of NAB equivalent of them. The polypeptide or polynucleotide are useful treating, preventing or diagnosing a disease or condition associated the expression of functional SFTM. These are particularly useful for diagnosing, treating or preventing autoimmune/inflammatory disorders

                                                                                                                                    The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAAI8642-AAA42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, activin/inhibin activity, chemotactic/Chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assaus for recentral trivity artherities and inflaments.
                                                                        assays for receptor C.N.S disorders.

                                                                                                                                                                                                                                                                                                    The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin, Inhibin activity, chemotactic/chemokinetic activity, headmostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and

encodes mouse MIVR-1.

```
The invention relates to an isolated nucleic acid molecule encoding a CC Mechanically Induced Vascular Receptor (MIVR)-1 polypeptide having CC cardiac cell anti-apoptotic activity and fragments of it provided CC they are not identical to Genbank sequences AI761441.1, AI594390, CC NM_00438 and AQ177461. Also included are expression vectors, host CC cells, the MIVR-1 polypeptide, MIVR-1 binding peptides, modulators of CC MIVR-1, contacting a molecule having cardiac cell anti-apoptotic activity with a candidate agent, where the molecule is a nucleic acid molecule CC comprising MIVR-1, IEX-1, VDUP-1, BTG-2 and TIS-11d or its expression product, determining if the anti-apoptotic activity is CC modulated and thereby identifying a modulator. The cardiac cell anti-capoptotic molecules and nucleic acids of the invention are useful for CC treating, diagnosing and monitoring progression of such diseases and CC disorders as characterised by increased apoptotic cell-death of vascular endothelial cells e.g. cardiac hypertrophy, myocardial infarction, Stroke, arteriosclerosis and heart failure. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Lee
                                                                                                                                                                                                                                                                                                                                                                                                                            Disclosure; Page
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel nucleic acid molecule encoding Mechanically Induced Vascular Receptor-1 polypeptide, useful for treating cardiovascular diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     RT,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       2002-280912/32.

The invention relates to an isolated polypeptide comprising a sequence with 60 % identity to one of prostate specific protein (PSP) sequences, corresponding an amino acid sequence encoded by one of 136 nucleotide prostate specific nucleic acids sequences, PSNA, (or a sequence that thybridises to it or is 60% identical to it), given in the specification. It comprising the vector comprising the polynucleotide, a host cell comprising the vector, an antibody specific for the PSP proteins and a vaccine comprising the protein or polynucleotide. The PSP and PSNA are useful for diagnosing and monitoring the presence and metastases of prostate cancer in a patient. The PSNA is useful for determining the presence of prostate specific protein in a sample, and cetermining the presence of prostate specific protein in a sample, and contrasting a patient with prostate cancer, which induces an immune response against the prostate cancer cell expressing the nucleic acid or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; ss; prostate specific nucleic acid; PSNA; cytostatic; non-cancerous prostate disease; PSP;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New polypeptide useful for diagnosing and monitoring the presence metastases of prostate cancer in a patient and as a component in databases for search analysis as well as in sequence analysis

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               polypeptide and a kit is useful for detecting a risk of cancer or presence of cancer in a patient. PSNA is useful as hybridisation probes to detect, characterise and quantify hybridising nucleic acids from both genomic and transcript-derived nucleic acid samples and also in microarrays. Sequences of PSP and PSNA are useful as components in databases for search analysis as well as in sequence analysis algorithms. PSNA is useful to drive in vivo expression of PSP. The present sequence is a PSNA of the invention.

                                                                                                   δÃ
                                                                                                                                             밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to an isolated nucleic acid molecule encoding a CC Mechanically Induced Vascular Receptor (MIVR)-1 polypeptide having CC cardiac cell anti-apoptotic activity and fragments of it provided CC they are not identical to Genbank sequences AI761441.1, AI594390, CC NM,004338 and AQ177461. Also included are expression vectors, host CC cells, the MIVR-1 polypeptide, MIVR-1 binding peptides, modulators of CC MIVR-1, contacting a molecule having cardiac cell anti-apoptotic activity with a candidate agent, where the molecule is a nucleic acid molecule CC comprising MIVR-1, IEX-1, VDUP-1, BTG-2 and TIS-11d or its comprising mivR-1, IEX-1, VDUP-1, BTG-2 and TIS-11d or its comprising mivR-1, its-11d earlier apoptotic activity is CC modulated and thereby identifying a modulator. The cardiac cell anti-apoptotic molecules and nucleic acids of the invention are useful for CC apoptotic molecules and nucleic acids of the invention are useful for CC disorders as characterised by increased apoptotic cell-death of vascular CC disorders as characterised by increased apoptotic cell-death of vascular CC endothelial cells e.g. cardiac hypertrophy, myocardial infarction, CC stroke, arteriosclerosis and heart failure. The present sequence CC is one of the four Genbank sequences (AI761441.1) which are homologous to the cDNA for human MIVR-1 and which are specifically disclaimed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

      The present sequence encodes a murine TANGO 261 polypeptide. The specification also describes TANGO 266, TANGO 216, TANGO 262, and TANGO 267. The TANGO polypeptides can be used to modulate cellular proliferation, modulate cellular differentiation and/or modulate cellular adhesion. The proteins can be used to treat any von Willebrand factor-associated disorder, regulate extracellular matrix structuring, cellular adhesion, and cell trafficking and/or migration, modulate cellular interactions, modulate cell adhesion in proliferative disorders, such as cancer, modulate the proliferation, differentiation, and/or function of cells that appear in the bone marrow, and leukocytes,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             cellular proliferation; cellular differentiation; cellular adhesion; von Willebrand factor-associated disorder; cell trafficking; cancer; hematopoietic associated disease; atelectasis; pulmonary congestion; oedemma; emphysema; chronic bronchitis; bronchial asthma; bronchiectasis; intestinal disorder; spleen associated disease; renal disorder; cardiovascular disorder; ischemic heart disease; hydrocephalus; brain herniation; iatrogenic disease; inflammation; meningitis; halbeimer's Disease; cerebral toxoplasmosis; Parkinson's disease;
                                                                                                                                                                                         Novel human and murine secreted proteins designated TANGO 216, 261, 262, 266 and 267 useful as modulating agents of cellular processes, e.g. for treating cancer -

CC describes TANGO 266, TANGO 261 proteins. The specification also CC describes TANGO 265, TANGO 267, TANGO 267. The TANGO CC polypeptides can be used to modulate cellular proliferation, modulate cellular differentiation and/or modulate cellular adhesion. The CC proteins can be used to treat any von Willebrand factor-associated CC disorder, regulate extracellular matrix structuring, cellular adhesion, The CC and cell trafficking and/or migration, modulate cellular interactions, cC modulate cell adhesion in proliferative disorders, such as cancer, CC modulate the proliferation, differentiation, and/or function of cells that appear in the bone marrow, and leukocytes, treat bone marrow, blood and hematopoietic associated diseases and disorders, atelectasis, CC pulmonary congestion or oedema, emphysema, chronic bronchitis, bronchial CC asthma and bronchiectasis, intestinal disorders, spleen associated CC asthma and bronchiectasis, intestinal disorders, spleen associated cond/or function of bone and cartilage cells and to treat bone and/or CC cartilage associated with the ovaries, and cerebral observations, brain herniations, latrogenic disease, inflammations, bacterial and viral meniagitis, Alaheimea's blease, cerebral
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          TANGO 266; TANGO 216; TANGO 261; TANGO 262; TANGO 267; Cellular proliferation; cellular differentiation; cellular adhesion; converse von Willebrand factor-associated disorder; cell trafficking; cancer; hematopoietic associated disease; atelectasis; pulmonary congestion; oedema; emphysema; chronic bronchitis; bronchial asthma; bronchiectasis; intestinal disorder; spleen associated disease; renal disorder; cardiovascular disorder; ischemic heart disease; hydrocephalus; brain herniation; latrogenic disease; inflammation; meningitis; halbeimer's Disease; cerebral toxoplasmosis; Parkinson's disease; alleiner's disease; alle

/clone_Torqan: Left pubic Bone; Vector: pT7T3-Pac
/note="Organ: Left pubic Bone; Vector: pT7T3-Pac
/note="Organ: Left pubic Bone; Vector: pT7T3-Pac
/note="Organ: Left pubic Bone; Vector: Site_1: EcoR I;
Site_2: Not I; NCI_GAP_EDI is a normalized cDNA library
containing the following tissue(s): Chondrosarcoma cell
line_CS5. The library was constructed according to Bonaldo
. Lennon and Soares, Genome Research, 6:791-806, 1996.
First strand cDNA synthesis was primed with an oligo-dT
primer containing a Not I site. Double stranded cDNA was
ligated to an EcoR I adaptor, digested with Not I, and
cloned directionally into pT7T3-Pac vector. The
oligonucleotide used to prime the synthesis of
first-strand cDNA contains a library tag sequence that is
located between the Not I site and the (dT)18 tail. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               sequence tag for this library is GCTCAAGGCT

                                                                                                                                                                                                                                                                                                                                     /note-"Organ: Eye; Vector: pSPORT1; Neural retina tissue was dissected from two 80 year old donors with no observed eye disease. 100ug of total RNA was used for library construction. A directionally cloned cDNA library in the pSPORR1 vector (Life Technologies) was constructed at Bioserve Biotechnology (Laurel MD) essentially following the protocols of the SuperScript Plasmid System full details of which are contained in the manufacturer's instruction manual (http://www.lifetech.com/). First strand synthesis was carried out using a Not I primer-adapter [5'.pgACTACTTCTACATCCGGCGCGCCCC(T)15-3']. EST analysis was performed on the unamplified library at the NIH Intramural Sequencing Center (NISC)."
